

**Research Participation Opportunity**  
**Project to Improve Symptoms and Mood after Spinal Cord Injury (SCI).**

After SCI, some people experience a cluster of symptoms including poor sleep, low energy, little interest in usual activities, depressed mood and pain. These symptoms can affect quality of life and may be treatable. Researchers at Baylor Institute for Rehabilitation are trying to determine whether a 12-week trial of venlafaxine XR (Effexor XR) is an effective treatment for these symptoms. You may qualify for this study if you have a SCI, are 18-64 years old, have some of these symptoms, are not taking venlafaxine XR and live within travelling distance to BIR 909 N. Washington, Dallas TX 75246. If you would like to be considered for this study, please contact Ann Marie Warren, PhD at (214) 820-9315
